

How to use the Tree of Life dashboards

Eight self-serve tools, one app. Each takes an Excel export you already pull from SAP, applies the team's rules, and hands back a finished, download-ready workbook. This guide walks you through every one — what to upload, which buttons to press, and what comes out.

BEFORE YOU START — THE BASICS

 **Open the app**

Go to the app link in your browser. Use the **menu on the left** to switch between the eight dashboards — the list matches the numbers in this guide.

 **Upload Excel**

Every dashboard runs on the `.xlsx` exports you already download from SAP or the portal. Drag the file in, or click to browse.

 **Download the result**

After processing, click the green **Download** button to save the finished workbook. Preview tables on screen first if you want to check it.

 **Nothing is stored**

Files are processed in your session and cleared when you leave. Nothing is saved on a server, so re-upload each time you run a report.

QUICK REFERENCE — WHICH TOOL, WHICH FILES

#	DASHBOARD	WHAT YOU UPLOAD	WHAT YOU GET BACK
1	Supplier Compliance	SAP PO export + Portal upload export	Compliance workbook + per-supplier bill-back tabs
2	Delivery Fill Rate	SAP/BW Delivery Fill Rate export	Shortage & fill-rate report (Excel)
3	Sales Order Fill Rate	SAP/BW Sales Order Fill Rate export	Unconfirmed-demand & fill-rate report (Excel)

#	DASHBOARD	WHAT YOU UPLOAD	WHAT YOU GET BACK
4	Daily Short Report	SAPUI5 Daily Short export	Order→invoice shorts by stage (Excel)
5	Overstock Report	Materials inventory + Last-Sell / BDM master	3-warehouse overstock workbook
6	Donate / Dispose List	Materials inventory + Last-Sell / BDM master	3-warehouse donate/dispose workbook
7	Risky Inventory	90-day report + 180-day cumulative report	4-sheet de-duplicated workbook
8	Batch Quality Analysis	SAP receiving-history export	Flagged batch/expiry issues + AI review (Excel)

1

Supplier Compliance Dashboard

DID SUPPLIERS UPLOAD THEIR INBOUND DOCUMENTS?

Matches every SAP purchase order that has an inbound delivery against the documents suppliers uploaded to the portal for a given month. Suppliers with an inbound PO but no valid portal file are flagged as non-compliant and billed back automatically.

FILES YOU UPLOAD

- ▶ The **SAP PO export** (**.xlsx** — PO numbers, inbound delivery status, dates)
- ▶ The **Portal upload export** (**.xlsx** — the supplier document list)

STEPS

- 1 Upload the SAP export on the left, the Portal export on the right.
- 2 Pick the **Report Year** and **Report Month** .
- 3 Click **Generate Compliance Report** .
- 4 Review the on-screen Monthly Summary and compliance %.
- 5 Click **Download Excel report** .

WHAT YOU GET

A multi-sheet workbook: Monthly Summary, matched vs. missing documents, pending TOL review, and a separate **bill-back tab per non-compliant supplier** with the charge owed.

- Monthly Summary
- Missing Portal File
- Pending TOL Review
- Supplier Summary
- BB-{Supplier}

⚠ The month scope is a **fixed audit rule**: a PO counts for the month if **any** of its date columns falls in that month — there's no setting to change it. Excluded PO types (certain prefixes) are dropped automatically and reported on screen.

Delivery Fill Rate Dashboard

WHERE ARE WE SHORTING OUTBOUND DELIVERIES?

Reads a SAP/BW Delivery Fill Rate export and shows shortages and fill rates by plant, product, and product group, highlighting the biggest-dollar shortfalls so you know where to chase supply first.

FILES YOU UPLOAD

- ▶ The **SAP/BW Delivery Fill Rate export** (`.xlsx` or `.xls`)

The app finds the real header row and fills SAP merged cells for you.

STEPS

- 1 Open the sidebar and upload the export.
- 2 Set **High Priority \$** (default \$1,000) to flag the **threshold** big shortages.
- 3 Optionally **Filters** — plant, product, narrow with product group, date, the status.
- 4 Read the KPIs and charts; **Download** tab. open the
- 5 Click **Generate** , then download the Excel report.

WHAT YOU GET

On-screen fill-rate KPIs, top-10 shortages, and plant/product breakdowns — plus a polished Excel report reflecting whatever filters you left active.

[Summary](#)[Shortage Report](#)[By Plant](#)[By Product](#)[Top 10](#)

Sales Order Fill Rate Dashboard

HOW MUCH DEMAND IS UNCONFIRMED, AND FOR WHOM?

The demand-side twin of the delivery dashboard. Reads a SAP/BW Sales Order Fill Rate export and surfaces unconfirmed demand and fill rates by key account, CDM, product, and plant.

■ FILES YOU UPLOAD

- The **SAP/BW Sales Order Fill Rate export** (`.xlsx` or `.xls`)

■ STEPS

- 1 Upload the export from the sidebar.
- 2 Set **High Priority \$** (default \$500) on the **threshold** unconfirmed demand.
- 3 Filter by key account, plant, product, CDM, status, or priority; choose a sort order.
- 4 Review KPIs and breakdowns on screen.
- 5 Generate and download the Excel report.

■ WHAT YOU GET

Unconfirmed-demand KPIs, an unconfirmed-lines report, and account / CDM / product / plant summaries, exported to Excel.

[Summary](#)[Unconfirmed Report](#)[By Account](#)[By CDM](#)[Top 10](#)

Daily Short Report Dashboard

WHERE DOES QUANTITY FALL OUT BETWEEN ORDER AND INVOICE?

Takes the SAPUI5 Daily Short export and traces every case from ordered → confirmed → delivered → invoiced, showing the fill rate at each hand-off and the lines shorted along the way.

FILES YOU UPLOAD

- The **SAPUI5 Daily Short export** (`.xlsx` or `.xls`)

STEPS

- 1 Upload the export from the sidebar.
- 2 Choose **Top N per table** (default Top 5) and any filters — plant, customer, vendor, order type, date.
- 3 Read **Overview** waterfall, then the the Unconfirmed / Shorted-at-Delivery / Shorted-at-Invoicing tabs.
- 4 Open the **Download** tab and click **Generate Excel Report**.

WHAT YOU GET

A workbook with a Summary of totals and fill rates, one sheet per short-analysis stage, and a Raw Data sheet with every line behind the numbers.

Summary

Unconfirmed

Shorted at Delivery

Shorted at Invoicing

Raw Data

⚠ The template's own summary/total rows at the bottom of the export are **detected and excluded automatically** — you don't need to trim the file first.

Overstock Report Dashboard

WHAT STOCK IS PILING UP NEAR ITS LAST SELLABLE DATE?

Matches on-hand inventory to the Last-Sell / BDM master and flags excess stock that is still sellable but approaching its last-sell-by date, split out by warehouse so each site sees its own list.

■ FILES YOU UPLOAD

- The **Materials inventory export** (.xlsx)
- The **Last-Sell / BDM Material Master** (.xlsx)

■ STEPS

- 1 Upload the Materials file and the Master file.
- 2 Set **date** — earliest shelf-life expiry to the **window** keep, and the last-sell-by cutoff.
- 3 Click **Process files** .
- 4 Preview each warehouse tab, **Download** . then click

■ WHAT YOU GET

A workbook with one sheet per warehouse, built to the business's overstock spec.

Mississauga

Calgary

Surrey

Donate / Dispose List Dashboard

WHAT CAN NO LONGER BE SOLD?

The mirror image of the Overstock report. Uses the same two files to list stock at, near, or past its shelf-life expiry — product that should be donated or disposed of rather than sold — across every storage location, by warehouse.

FILES YOU UPLOAD

- ▶ The **Materials inventory export** (same file as Overstock)
- ▶ The **Last-Sell / BDM Material Master** (same file as Overstock)

STEPS

- 1 Upload the Materials file and the Master file.
- 2 Set the single cutoff: include **on or** this shelf-life expiry **before** date.
- 3 Click **Process files** .
- 4 Preview each warehouse tab, **Download** . then click

WHAT YOU GET

A donate/dispose workbook with one sheet per warehouse.

Mississauga

Calgary

Surrey

- 📦 Overstock and Donate/Dispose are two halves of the same shelf-life picture: what's **still sellable but overstocked** vs. what's **past selling**. Same uploads, opposite side of the cutoff date.

Risky Inventory Dashboard

STRIP THE REPEATED ROWS OUT OF THE 180-DAY REPORT

Automates the manual step you do today: the cumulative 180-day report repeats the first 90 days, so this removes those already-reported rows — comparing complete inventory lines, not just the Material number — and rebuilds the four-sheet workbook.

■ FILES YOU UPLOAD

- The **90-day report** (.xlsx)
- The **180-day cumulative report** (.xlsx)

■ STEPS

- 1 Upload the 90-day report and the 180-day cumulative report.
- 2 Click **Process files** .
- 3 Check the count of rows removed and the cleaned preview.
- 4 Click **Download Risky Inventory Report** .

■ WHAT YOU GET

A four-sheet workbook — the 90-day detail and summary, plus the de-duplicated 180-day detail and summary.

90D Detail

90D Summary

180D Detail

180D Summary

Batch Quality Analysis

CATCH BAD BATCH NUMBERS & EXPIRY DATES FOR REVIEW

Scans the SAP receiving history for likely batch-number and expiry-date data-quality problems, groups them into issues, and runs an AI reviewer over each group to explain the pattern and suggest what to verify. It's a review aid — the AI never edits SAP or invents corrected values.

■ FILES YOU UPLOAD

- The **SAP receiving-history export** (.xlsx)

■ STEPS

- 1 Upload the receiving export.
- 2 Click **Process Batch Quality File** — detection and the AI review run together.
- 3 Work through the tabs: Summary → Flagged Issues → Material Batch History → Review Results.
- 4 Download the Excel review pack.

■ WHAT YOU GET

A flagged-issues workbook with each issue's risk level, the records involved, the AI's summary and recommended review steps, and questions to put to the supplier or receiver.

Upload & Summary

Flagged Issues

Material Batch History

Review Results

⚠ Treat the AI output as a **starting point for human judgment**, not a decision. It highlights patterns worth checking; a person confirms and fixes the data in SAP.

Rule of thumb: pick the dashboard from the left menu, upload the Excel it asks for, press the primary button, then download the workbook. If a file won't load, the tool prints a plain-English error — check you uploaded the right export, then try again.
